

Wharton Doctoral Program in Applied Economics

Our Fellowship offers full tuition and fees along with a stipend of \$23,460 per year to highly qualified candidates whose goal is to become a leading applied economics researcher. An undergraduate education in economics and mathematics provides an excellent foundation for doctoral studies in interested in Applied Economics.

Wharton's PhD program in Applied Economics gives students the tools and training to get jobs in applied-economics positions in economics departments, business schools, and public policy programs. Our program is designed to prepare students to conduct rigorous research. Students take core courses in microeconomic theory and quantitative methods. Students also take two major field concentrations designed to give them the tools necessary to conduct quality research in a core economic discipline.

Drawing on a large faculty of applied economists across multiple Wharton departments and the Law School, the Applied Economics program allows specialization in a number of areas, including:

- * Behavioral Economics
- * Economics of Risk Management
- * Industrial Economics and Business Regulation
- * Public Economics and Political Economy
- * Urban Economics and Real Estate

Students can also form a second major using courses offered by the Penn Economics Department, including macroeconomics and international economics. Additional finance courses can be taken from the Finance Department.

Applications are due by December 15, 2009. Additional information on our program is available online at:
